

tabora

Tabora is the result of our invention-push experiments and innovations in designing interior pendant lights. Sticking to our common concepts related to shape dimensions, we have developed technology that uses uncommon materials and technologies for this industry. Tabora is suitable for lighting over dining tables, low seating tables or bar countertops. The light is effective both individually and in an array of several lights across the ceiling according to the size and shape of the table, above which it is suspended. It illuminates the area underneath, and emits light toward the ceiling, creating general lighting of the room. Tabora is a semi-flushmount, ceiling light fitting designed to be an active centre in the overall design and an accent light of any interior.
